SPORTS INJURY PREVENTION GUIDE

For Athletes of All Disciplines

A practical guide to protecting your body,
training smarter, and staying in the game longer.

MEDICAL DISCLAIMER

This guide is for educational and informational purposes only.

It does not constitute medical advice, diagnosis, or treatment. Always consult a qualified healthcare professional before starting any new exercise programme or if you are experiencing pain or injury.

The authors and publishers of this guide accept no liability for any injury, loss, or damage arising from the use or misuse of the information provided herein.

If you are in pain, stop training and seek professional advice.

WHAT YOU'LL LEARN

Injury Patterns
Where & why athletes break down

Warm-Up Protocol
10-minute joint protection routine

Joint Protection
Shoulder, knee & ankle care

Recovery Strategy
Sleep, load, active recovery

Red Flags
When to stop training immediately

Learn More
About Profile

01

THE PROBLEM

Why athletes break down

THE REALITY

The hard truth about sports injuries

50-70%

of athletes experience
at least one injury per year.

*Most athletes train through pain
on a regular basis.*

#1

Shoulder & Knee
Most frequently injured

75%

Of injuries are
preventable with prehab

3-6x

Higher re-injury risk
when rushing back

INJURY MAP

The 5 most commonly injured areas

1

SHOULDER

Rotator cuff strain, impingement, instability

2

KNEE

Ligament tears, meniscus, patella issues

3

WRIST / HAND

Sprains, fractures from impact & load

4

ANKLE

Sprains from pivots, jumps & direction changes

5

LOWER BACK

Disc issues, muscle strain from rotation

02

WARM-UP & PREVENTION

Proper preparation before every session

WARM-UP PROTOCOL

10 minutes that save your joints

10

MINUTES

Before every training session.

PHASE 1

5' Upper Body

- Shoulder circles
- Band pull-aparts
- Wall slides
- Scapular push-ups

PHASE 2

5' Lower Body

- Hip circles
- Cossack squats
- Leg swings
- Ankle mobility

SHOULDER ACTIVATION

4-step shoulder routine

STEP 1

Band Pull-Apart

3 x 15 reps

Scapular retraction & rhomboid activation

STEP 2

External Rotation

3 x 12 reps

Supraspinatus & infraspinatus

STEP 3

Wall Slides

3 x 10 reps

Scapular control & ROM

STEP 4

Push-Up Plus

3 x 10 reps

Serratus & stabilization

HIP & KNEE

4-step hip/knee routine

Cossack Squat

3 x 8/side

Hip mobility
& knee stability

Leg Swings

2 x 15/side

Dynamic mobility
hip & hamstrings

Deep Squat Hold

3 x 20sec

Ankle mobility
& hip flexibility

Single-Leg RDL

3 x 8/side

Balance, hip,
& hamstring activation

A prepared joint = better force transfer

Shoulder · Knee · Ankle

03

JOINT PROTECTION

Shoulder, knee, and ankle care for athletes

SHOULDER

3 rules athletes ignore

01 STABILIZATION BEFORE STRENGTH

Don't load overhead without activating your rotator cuff.

02 PUSH / PULL BALANCE

For every push exercise, do at least 1 pull exercise.

03 DON'T IGNORE SHOULDER PAIN

Shoulder pain during training = a signal to stop and assess.

“The knee follows the hip”

When you lose hip mobility, you overload the knee.
Strong hips = protected knees.

“The ankle is your suspension”

pivot · landing · balance · control

04

RECOVERY

Recover like a professional athlete

RECOVERY

Fight-level recovery

Sleep

7-9 hours / night

The #1 recovery factor.
Non-negotiable for athletes.

Load Management

Progressive increase

No sudden volume changes.
Monitor RPE & wellness.

Active Recovery

Light movement

Mobility & foam rolling.
No passive rest days.

MYTH BUSTING

Recovery myths: What works and what doesn't

ICE

- ✓ Reduces pain short-term
- ✓ Helps after acute injury
- ✗ Doesn't speed up healing
- ✗ May delay recovery

STRETCHING

- ✓ Increases ROM long-term
- ✓ Reduces muscle stiffness
- ✗ Doesn't prevent injuries alone
- ✗ Static pre-workout ↓ strength

WARNING

When you MUST stop training

Joint Swelling

Visible inflammation around any joint

Weakness

Sudden loss of strength in a limb

Numbness / Nerve Signs

Tingling, pins & needles, or loss of sensation

Pain > 7 Days

Persistent pain without improvement

Altered Movement

Compensating technique due to pain

05

NEXT STEPS

Take action and protect your body

YOUR PREVENTION CHECKLIST

Before Training

- ✓ 10-min warm-up protocol
- ✓ Shoulder activation drills
- ✓ Hip & knee mobility

During Training

- ✓ Monitor fatigue levels
- ✓ Don't push through sharp pain
- ✓ Maintain technique quality

After Training

- ✓ Active recovery / cool-down
- ✓ Foam rolling & mobility
- ✓ 7-9 hours sleep

FOR ATHLETES

Assessment + Treatment Plan

✓ **Initial Assessment (45 min)**

Initial physiotherapy assessment

✓ **2 Follow-Up Sessions**

2 follow-up treatment sessions

✓ **Recovery & Prehab Plan**

Personalised recovery & prehab plan

IMPORTANT REMINDER

This guide does not replace professional medical advice.

The exercises and recommendations in this guide are general in nature. Individual conditions vary. Before beginning any exercise programme, consult your physician or a qualified physiotherapist.

If you experience pain, swelling, or any unusual symptoms during exercise, stop immediately and seek professional help.

Your health is your responsibility. Train smart. Stay safe.

TRAIN HARD.
TRAIN SMART.
STAY UNINJURED.
